

## Westwood Vision Zero Street Lab Installation

Safe streets are essential to community connectivity, safety and livability. The City of Edmonton has been exploring a Vision Zero Street Lab in Westwood, which uses adaptable traffic calming measures to address traffic safety concerns.

### Community Traffic Safety Concerns: What We Heard

During the summer of 2022, the community lead for this project conducted public engagement to gather community expertise about lived experiences and traffic safety concerns. Community members shared:

- Respondents were in favour of curb extensions and other traffic calming measures for the 119 Avenue and 104 Street area
- There were concerns of vehicles speeding and pedestrian safety at this intersection

### Street Lab Plan

The installation is scheduled to happen between **April 17 - 28, 2023**, weather and resourcing permitting.

Installation and Location	Benefit
4 curb extensions will be installed at the intersection of 119 Avenue and 104 Avenue	Curb extensions narrow the street in order to: <ul style="list-style-type: none"> <li>✓ Improve safety and visibility of the pedestrians crossing the roadway</li> <li>✓ Slow vehicles and calm traffic by visually narrowing the street</li> <li>✓ Prohibit people from parking close to the crosswalk, creating clearer sightlines for all road users</li> </ul>
Two adaptable speed humps will be installed on 104 Street, between 119 Avenue and 120 Avenue.	Adaptable speed humps help slow traffic and local roads and ensure safe travel for everyone.

## What You Can Expect to See:

## Next Steps:

The Street Lab will be evaluated later in 2023. As these installation(s) are adaptable, they may be adjusted based on future evaluation learnings.
