

Vision Zero Street Labs Road Map

Intake

A community applies for a Vision Zero Street Lab to address traffic safety concerns in their neighbourhood.

NEIGHBOURHOOD SELECTION

The City will gather information to get a better understanding of the traffic safety concerns and determine whether a Street Lab will be explored in the community.

Engagement

The City will explore residents' perspectives and gain insights into their lived experiences related to traffic safety.

WHAT WE HEARD REPORT

The City will use the feedback from residents combined with technical data to determine if a Street Lab will be the best solution for the concerns in the neighbourhood. A What We Heard Report will be created to share the results.

Creating the Street Lab Plan

The City will use what they have learned to develop a Street Lab Plan and will share it with neighbourhood residents.

Installation

City staff will bring the Street Lab to life by installing adaptable traffic calming measures.

Evaluation

Residents will have the opportunity to give feedback on the project through a survey approximately three to six months after the measures have been installed.
